PERSONAL

Working with web applications since 2018, focused on the manufacturing industry, such as shoe factories and leather industry, I have taken part in all the stages of software development, which are planning, analysis, design, development & implementation, testing and maintenance.

Always trying to be the most effective as possible, writing the cleanest and easiest to understand code.

I want to be surrounded with amazing people that motivate me to grow personally and professionally.

WORK EXPERIENCE

Front-end Developer
At CWI Software
February 2020 - Present

At CWI, I work as a third-party employee for Arezzo&Co, a company that owns more than 8 big ecommerce websites that together, have more than 100 thousand visits monthly. Some of them are Vans, Arezzo, Fiever and ZZMall. This last one, is the one I work the most part of my job, as a member of the Marketplace Squad.

- I work with technologies such as: React, Sass, Gulp, JSP.
- We have weekly meetings to plan every squad sprint, review the last sprint and daily meetings to improve team communication and to know the status of important tasks.

Software Developer
At Kunden Systems
February 2018 - February 2020

Kunden Systems is a software house that focuses on business management applications, such as ERP, production control panels, BI tools and all that is relevant to manage a manufacturing industry.

- I've created new web applications using many tools and libraries such as: AngularJS (version 1.x), Express, Hapi, JQuery, SASS, Grunt at the front-end, and NodeJS at the back-end.
- Created the whole database structure of the projects, using Oracle PL/SQL.
- Worked in a tiny team (5 members) and used SCRUM as agile development methodology.
- Used pomodoro as a productivity booster.
